

Wiley Interdisciplinary Reviews (WIREs)

Alberto Pepe¹

¹Authorea Team

Abstract

The abstract should be a concise (less than 250 words) description of the article and its implications. It should include all keywords associated with your article, as keywords increase its discoverability. Please do not include generic phrases such as “This article discusses . . .” or “Here we review,” or references to other articles. Note: You will be required to copy this abstract into the submission system when uploading your article.

Remember that you are writing for an interdisciplinary audience. Please be sure to discuss interdisciplinary themes, issues, debates, etc. where appropriate. Note that the WIREs are forums for review articles, rather than primary literature describing the results of original research.

Article Title

The title should not exceed 20 words. Please be original and try to include keywords, especially before a colon if applicable, as they will increase the discoverability of your article. [Tips on Search Engine Optimization](#)

Article Type

The [Article Type](#) denotes the intended level of readership for your article. Please select one of the below article type options. An Editor may have mentioned a specific Article Type in your invitation letter; if so, please let them know if you think a different Article Type better suits your topic.

- Opinion
- Primer
- Overview
- Advanced Review
- Focus Article
- Software Focus

Authors

List each person’s full name, ORCID iD, affiliation, email address, and any conflicts of interest. Please use an asterisk (*) to indicate the corresponding author.

The preferred (but optional) format for author names is First Name, Middle Initial, Last Name.

The submitting author is required to provide an [ORCID iD](#), and all other authors are encouraged to do so.

Wiley requires that all authors disclose any potential conflicts of interest. Any interest or relationship, financial or otherwise, that might be perceived as influencing an author's objectivity is considered a potential conflict of interest. The existence of a conflict of interest does not preclude publication.

Abstract

The abstract should be a concise (less than 250 words) description of the article and its implications. It should include all keywords associated with your article, as keywords increase its discoverability ([Tips on Search Engine Optimization](#)). Please try not to include generic phrases such as "This article discusses ..." or "Here we review," or references to other articles. Note: You will be required to copy this abstract into the submission system when uploading your article.

Optional: If you would like to submit your abstract in an additional language, [read more](#).

Graphical/Visual Abstract and Caption

Include an attractive full color image to go under the text abstract and in the online Table of Contents. **You will also need to upload this as a separate file during submission.** It may be a figure or panel from the article or may be specifically designed as a visual summary. While original images are preferred, if you need to look for a thematically appropriate stock image, you can go to [pixabay.com](#) (not affiliated with Wiley) to find a free stock image with a CC0 license. Another option you have is to utilize professional illustrators with Wiley's [Graphical Abstract Design service](#).

Size: The minimum resolution is 300 dpi. Please keep the image as simple as possible because it will be displayed in multiple sizes. Multiple panels and text other than labels are strongly discouraged.

Caption: This is a narrative sentence to convey the article's essence and wider implications to a non-specialist audience. The maximum length is 50 words, but consider using 280 characters or less to facilitate social media sharing, which can increase the discoverability of your article.

1. Introduction

Introduce your topic in ~2 paragraphs, ~750 words.

While Wiley does consider articles on preprint servers (ArXiv, bioRxiv, psyArXiv, SocArXiv, engrXiv, etc.) for submission to primary research journals, preprint articles should not be cited in WIREs manuscripts as review articles should discuss and draw conclusions only from peer-reviewed research. Remember that original research/unpublished work should also not be included as it has not yet been peer-reviewed and could put the work in jeopardy of getting published in the primary press.

Citations are automatically generated by Authorea. Select **cite** to find and cite bibliographic resources. The citations will automatically be generated for you in APA format, the style used by most WIREs titles. If you are writing for *WIREs Computational Molecular Science* (WCMS), you

will need to use the Vancouver reference and citation style, so before exporting click Export-> Options and select a Vancouver export style.

A sample citation: [\(Murphy et al., 2019\)](#)

2. First Level Heading

Begin the main body of the text here, using a maximum of 3 levels of headings (style as shown below and numbered). Try to create headings that:

- help the reader find information quickly;
- are descriptive yet specific;
- are compatible in phrasing and style; and
- are concise (less than 50 characters)

2.1 Second level heading

Text

2.1.1 Third level heading

Text

Figures and Tables

Figures and tables should be numbered separately, in the order in which they appear in the manuscript. Please embed them in the correct places in the text to facilitate peer review. Permission to **reuse or adapt** previously published materials must be submitted before article acceptance. [Resources](#)

Production quality figure files with captions are still to be submitted separately. [Figure preparation and formatting](#)

Captions should stand alone and be informative outside of the context of the article. This will help educators who may want to use a PowerPoint slide of your figure. Explain any abbreviations or symbols that appear in the figure and make sure to include **credit lines** for any previously published materials.

Conclusion

Sum up the key conclusions of your review, highlighting the most promising scientific developments, directions for future research, applications, etc. The conclusion should be ~2 paragraphs, ~750 words total.

Funding Information

You will be required to enter your funding information into the submission system so that we can apply proper IDs to your funders and help you comply with any funder mandates.

Research Resources

List sources of non-monetary support such as supercomputing time at a recognized facility, special collections or specimens, or access to equipment or services. [Research Resources](#) can also be added to ORCID profiles. For biomedical researchers, the [Resource Identification Portal](#) supports NIH's new guidelines for Rigor and Transparency in biomedical publications.

Acknowledgments

List contributions from individuals who do not meet the criteria for authorship (for example, to recognize people who provided technical help, collation of data, writing assistance, acquisition of funding, or a department chairperson who provided general support), **with permission** from the individual. Thanks to anonymous reviewers are not appropriate.

Notes

Authors writing from a humanities or social sciences perspective may use notes if a **comment or additional information** is needed to expand on a citation. (Notes only containing citations should be converted to references. Conversely, any references containing comments, such as "For an excellent summary of. . .," should be converted to notes.) Notes should be indicated by **superscript letters**, both in the text and in the notes list. Citations within notes should be included in the reference section, as indicated below.

Further Reading

For readers who may want more information on concepts in your article, provide full references and/or links to additional recommended resources (books, articles, websites, videos, datasets, etc.) that are not included in the reference section. Please do not include links to non-academic sites, such as Wikipedia, or to impermanent websites.

Note About References

References are automatically generated by Authorea. Select **cite** to find and cite bibliographic resources. The bibliography will automatically be generated for you in APA format, the style used by most WIREs titles. If you are writing for *WIREs Computational Molecular Science* (WCMS), you will need to use the Vancouver reference style, so before exporting click Export-> Options and select a Vancouver export style.
